PAUPERS IN ALMSHOUSES: 1923

A census of paupers in almshouses in the United States was taken in the year 1923, the statistics covering paupers present in almshouses on January 1, 1923, those admitted during 1922, and those who were discharged or transferred, or who died during 1922.

This bulletin presents the more important statistics, together with comparative figures for preceding censuses. Additional statistics will be presented in the complete report now in course of preparation. These statistics relate only to inmates of public almshouses and do not include inmates of any other institutions or recipients of outdoor relief.

Since the statistics relate only to almshouse paupers, it is evident that they do not indicate the extent of poverty or of pauperism in the United States and that they should not be used as a basis for comparisons between States as to the extent of pauperism in general. A State may have few almshouse paupers because it provides but few almshouses, or its almshouse population may be small because a policy of outdoor relief prevails or because many of its needy poor—the insane, the feeble-minded, the epileptic, etc.—are cared for in special institutions. On the other hand, the almshouse population of a State may be large because the State uses its almshouses as temporary shelters for vagrants or as places of detention for petty criminals, or because its almshouses are combined with free hospitals for the poor or are used for the relief of women and children for whose care special institutions have not been provided. The size of the almshouse population of a State is influenced also by climatic conditions, the racial composition of its population, and the nature of its industries.

The purpose of the statistics herein presented is to show how many persons are cared for in almshouses, their geographic distribution, and such personal facts about them as their sex, age, color or race, and marital condition.
